Green Hangerz is America's premier recycling resource entirely dedicated to recycling clothes hangers. Green Hangerz accepts and collects used clothes hangers nationwide for reuse and recycling. We strive to lessen environmental impact by encouraging the reuse/recycling of natural resources through clothes hanger reclamation. Green Hangerz is a locally owned and operated company in Denver, Colorado.

What we do: 1) Green Hangerz sells recycling bins (our [Green Hangerz Resource Bin](#)) to dry cleaners and clothing-related businesses, and donates [bins to charity organizations](#). They may then collect their own excess hangers and encourage customers to recycle hangers at their storefront; reusing and recycling as needed. 2) We collect unwanted hangers through community recycling drives, mail-in campaigns and Metro Denver truck collections for large amounts. 3) At our facility in Denver, used hangers are sorted and repackaged for distribution to businesses, charity organizations and the general public. Hangers that are not fit for reuse are recycled at local recycling facilities.

“What’s the big deal with throwing away a few old hangers?”

Consider this... 8-10 billion plastic and wire hangers are produced and sold every year, and only about 15% are ever recycled. There are enough plastic hangers thrown away every year to fill all 102 floors of the Empire State Building 4.6 times! And when these hangers make their way into landfills, they leach benzene (a carcinogen) and bisphenol-A (a hormone disrupter) into our ground water.

In addition, consider the environmental impact of mining metal, distilling petroleum or harvesting wood to create new hangers. All of these processes consume an enormous amount of our natural resources and energy.

We hope you will join us in spreading the word about Green Hangerz and help create a healthier planet for all of us.

Green Hangerz – REUSE, RECYCLE, REWIRE!
